SUMMARY:

Solutions Architect with 3+ years of experience designing and improving cloud-based systems across healthcare, banking, and logistics environments. Experience with Azure, AWS, Kubernetes, Terraform, CI/CD, APIs, and monitoring tools to support application modernization, system integration, security, and platform stability. Focused on solution design, system integration, architecture documentation, cloud modernization, and stakeholder alignment, with limited hands-on coding. Worked closely with product, engineering, and security teams to improve deployment consistency and reduce issue resolution time across enterprise applications.

TECHNICAL SKILLS:

Cloud Platforms & Architecture: Microsoft Azure, AWS, Cloud-Native Architecture, Microservices, Event-Driven Architecture, Serverless Architecture, Distributed Systems, High Availability, Scalability, Disaster Recovery, Solution Design

DevOps, Containers & IaC: Terraform, CI/CD Pipelines, GitHub Actions, Azure DevOps, Jenkins, Docker, Kubernetes, Infrastructure as Code, GitOps, Release Automation, Environment Provisioning

Integration & APIs: REST APIs, API Management, OpenAPI, Swagger, OAuth 2.0, Service-to-Service Integration, Event Streaming, Messaging Patterns, FHIR, HL7, Enterprise Integration

Security & Governance: IAM, Role-Based Access Control, Encryption, Secrets Management, Threat Modeling, Network Security, Security Reviews, Compliance Controls, HIPAA, PHI Protection, Risk Assessment

Data, AI & Observability: SQL, Databricks, ETL/ELT, Data Pipelines, AI Solution Design, LLM Integration Fundamentals, Azure Monitor, Splunk, OpenTelemetry, Logging, Distributed Tracing, Performance Monitoring

Programming & Collaboration: Java, Python, Spring Boot, Jira, Confluence, Visio, Draw.io, Technical Documentation

EXPERIENCE:

Technical Solution Architect **Jul 2025 – Present**
UnitedHealth Group | OH, USA

- Architected Azure-based member and claims solutions using Kubernetes, APIs, and event-driven services to modernize legacy workflows, improving release reliability and supporting 99.9% platform availability.
- Evaluated application, data, and integration dependencies across provider and care management platforms to shape migration roadmaps, reducing design rework by 30% during multi-team transformation efforts.
- Implemented FHIR and HL7 integration standards with Azure API Management and secure messaging to streamline clinical data exchange while maintaining HIPAA compliance and stronger PHI protection.
- Developed reusable Terraform modules and GitHub Actions pipelines to standardize cloud environment builds, cutting provisioning effort by 40% and improving deployment consistency across engineering teams.
- Orchestrated architecture reviews with product, security, and engineering teams to assess technical options early, shortening approval cycles by 25% and improving planning across cross-functional delivery workstreams.
- Strengthened platform security by applying role-based access, encryption, threat modeling, and logging controls to protect member data, resulting in cleaner audits and fewer remediation findings.
- Optimized observability with Azure Monitor, Splunk, and OpenTelemetry dashboards so support teams could identify production issues faster, lowering mean time to resolution by 35%.
- Guided proof-of-concept development for AI-assisted document and workflow automation using Python, Databricks, and secure LLM services, helping operations teams validate technical fit before rollout.

Associate Solutions Architect **May 2021 – Jul 2023**
Mphasis | India

- Analyzed legacy banking and logistics applications to identify cloud migration patterns, helping delivery teams prioritize refactor candidates and reduce solution assessment time by 25%.
- Designed AWS and Azure reference architectures for API-first modernization programs, enabling secure, scalable integrations across customer platforms and improving deployment readiness for multi-team releases.
- Built proof-of-concept microservices using Java, Spring Boot, Docker, and Kubernetes to validate modernization options, giving clients faster technical decisions and lowering prototype turnaround from weeks to days.
- Partnered with business analysts, developers, and client stakeholders to translate functional needs into solution designs, which improved requirement clarity and reduced rework during sprint delivery.
- Created reusable Terraform templates and CI/CD workflows in Jenkins and Azure DevOps to standardize infrastructure provisioning, cutting environment setup effort by 40% across shared project teams.
- Implemented API security controls with OAuth 2.0, encryption, and gateway policies to support regulated enterprise workloads, strengthening compliance posture and improving audit readiness across integration services.
- Evaluated application performance and observability gaps using CloudWatch, Azure Monitor, and Splunk, allowing support teams to resolve production issues faster and reduce incident triage time by 30%.
- Documented solution blueprints, data flows, and risk considerations for architecture reviews, helping senior architects guide client decisions and improving handoffs across offshore and onsite teams.

EDUCATION:

Master of Science in Computer Science, Saint Louis University, Saint Louis, Missouri, USA **2023 - 2025**
Bachelor of Technology in Information Technology, Parul University, Vadodara, Gujarat, India **2019 - 2022**
